VERSION WITH MARKINGS TO SHOW CHANGES MADE

IN THE CLAIMS:

Claims 1, 2, 9, and 13 have been amended as follows:

CLAIMS

1. (AMENDED) A method for carrying out, over a communication network of interconnecting computers, electronic transactions between a plurality of merchants using at least one server computer and at least one buyer using a client computer, comprising:

displaying, at the client computer, a separate representation for each item selected by the buyer from at least two different merchants, wherein each separate representation has an associated one of a plurality of selectable states, and wherein a certain one of the plurality of selectable states indicates that the buyer desires to purchase a desired item from a first merchant if a previous transaction which bought another item from a second merchant can be canceled; and

~~associating displaying an indication of the one associated selectable state one of a plurality of selectable states with each displayed separate representation; and wherein a certain one of the plurality of selectable states indicates that the buyer desires to purchase a desired item from a first merchant if a previous transaction which bought another item from a second merchant can be canceled~~

selecting one of the displayed separate representations to have a selectable associated state that indicates that the buyer desires to purchase a desired item from a first merchant if a previous transaction which bought another item from a second merchant can be canceled.

2. (AMENDED) A method for carrying out, over a communication network of interconnecting computers, electronic transactions between a plurality of merchants using at least one server computer and at least one buyer using a client computer, comprising:

AUS990886US1

PATENT
09/513,818

enabling the client computer to display a separate representation for each item selected by the buyer from at least two different merchants wherein each representation has one of a plurality of associated states at a given instance in time; ~~and~~

displaying an indication of the one associated selectable state with each displayed separate representation; and

selecting, by the buyer, ~~a desired item from a certain merchant with one of the~~ displayed separate representations to have a selectable associated state that indicates a ~~selected associated state indicating~~ that the buyer desires to purchase the desired item if a previous transaction which bought another item from another merchant can be canceled.

3. (PREVIOUSLY AMENDED) The method of claim 2 further comprising:
sending, from the client computer, to the certain merchant an identification of the other merchant and the other item; and
receiving a notification that the previous transaction is canceled.

4. (PREVIOUSLY AMENDED) The method of claim 2 wherein the selected associated state causes an indication to be sent from the client computer to the certain merchant to lock specific data associated with the desired item from being accessible by a different client computer during a period that an associated representation for the desired item has the selected associated state.

5. (Unchanged) The method of claim 3 further comprising changing the selected state to a different state, upon notification of the cancellation, wherein the different state provides an indication of one of the following: a) the buyer desires to put the desired item on hold for a time to consider buying the desired item, and b) the buyer has bought the desired item.

PATENT
09/513,818

6. (Unchanged) The method of claim 3 wherein the other item has a displayed other representation on the client computer wherein the associated state is changed, upon receipt of the notification, to indicate that the previous transaction is canceled.

7. (Unchanged) The method of claim 3 wherein the other item has a displayed other representation on the client computer which becomes automatically deleted, upon receipt of the notification indicating that the previous transaction is canceled.

8. (CANCELED) A client computer system enabled to communicate over a network with at least one server computer system for carrying out electronic transactions for a buyer using the client computer system for the purchase of items from a plurality of merchants using the at least one server computer system, the client computer system comprising:

means for displaying, at the client computer, a separate representation for each item selected by the buyer from at least two different merchants; and

means for associating one of a plurality of selectable states with each separate representation wherein a certain one of the plurality of selectable states indicates that the buyer desires to purchase a desired item from a first merchant if a previous transaction which bought another item from a second merchant can be canceled.

9. (AMENDED) A client computer system enabled to communicate over a network with at least one server computer system for carrying out electronic transactions for a buyer using the client computer system for the purchase of items from a plurality of merchants using the at least one server computer system, the client computer system comprising:

a storage device having a set of instructions; and

a processing unit, connected to the storage device, wherein the processing unit executes the set of instructions for i) means for displaying a separate representation for

each item selected by the buyer from at least two different merchants, wherein each separate representation has an associated one of a plurality of selectable associated states at a given instance in time, and wherein a certain one of the plurality of selectable associated states indicates that the buyer desires to purchase a desired item from a first merchant if a previous transaction which bought another item from a second merchant can be canceled; ii) displaying an indication of the one associated selectable state with each displayed separate representation; and iii) executing a selection, by the buyer, of a desired item from a certain merchant causing one of the displayed separate representations to have a selectable associated state that means for selecting, by the buyer, a desired item from a certain merchant with a selected associated state indicating indicates that the buyer desires to purchase the desired item if a previous transaction which bought another item from another merchant can be canceled.

10. (PREVIOUSLY AMENDED) The system of claim 9 further comprising:
means for sending, from the client computer, to the certain merchant an identification of the other merchant and the other item; and
means for receiving a notification that the previous transaction is canceled.

11. (PREVIOUSLY AMENDED) The system of claim 9 wherein the selected associated state causes an indication to be sent from the client computer to the certain merchant to lock specific data associated with the desired item from being accessible by a different client computer during a period that an associated representation for the desired item has the selected associated state.

12. (Unchanged) The system of claim 10 further comprising means for changing the selected state to a different state, upon notification of the cancellation, wherein the different state provides an indication of one of the following: a) the buyer desires to put

the desired item on hold for a time to consider buying the desired item, and b) the buyer has bought the desired item.

13. (AMENDED) A computer program having computer readable program code means, on a computer usable medium, for enabling a client computer system to communicate over a network with at least one server computer system to carry out electronic transactions for a buyer using the client computer system to purchase items from a plurality of merchants using the at least one server computer system, the program comprising:

means for displaying, at the client computer, a separate representation for each item selected by the buyer from at least two different merchants, wherein each separate representation has an associated one of a plurality of selectable states, and wherein a certain one of the plurality of selectable states indicates that the buyer desires to purchase a desired item from a first merchant if a previous transaction which bought another item from a second merchant can be canceled; and

~~means for associating~~ means for displaying an indication of the one associated selectable state ~~one of a plurality of selectable states~~ with each displayed separate representation; and wherein a certain one of the plurality of selectable states indicates that the buyer desires to purchase a desired item from a first merchant if a previous transaction which bought another item from a second merchant can be canceled

means for selecting one of the displayed separate representations to have a selectable associated state that indicates that the buyer desires to purchase a desired item from a first merchant if a previous transaction which bought another item from a second merchant can be canceled.

14. (CANCELED) A computer program having computer readable program code means, on a computer usable medium, for enabling a client computer system to communicate over a network with at least one server computer system to carry out

electronic transactions for a buyer using the client computer system to purchase items from a plurality of merchants using the at least one server computer system, the program comprising:

means for displaying a separate representation for each item selected by the buyer from at least two different merchants wherein each representation has one of a plurality of associated states at a given instance in time; and

means for selecting, by the buyer, a desired item from a certain merchant with a selected associated state indicating that the buyer desires to purchase the desired item if a previous transaction which bought another item from another merchant can be canceled.
